

About the GNU GPL source code in Canyon CN-BR1:

The web service codes of the web configuration interface inside of the router device does use the Boa web server version 0.92r which is a code released under GNU GPL.

Based on the GNU GPL, the user has the right to get the source codes of the work which is placed in the CD.

In case that the user is in needs of the latest released or development version of the Boa web server, version 0.94.13 currently, here (<http://www.boa.org/>) is the link to its original and official web site.

The user should be warned that the codes has been ported (changed, modified and be removed) to Nucleus real time OS (an embedded operating system from Nucleus at

<http://www.acceleratedtechnology.com>, not what the Boa web server originally based is any more).

There is no warranty granted to the user on the codes released, there is no guarantee granted to the user that the codes would be compatible and used at any ways on any other platforms, and there is no future maintenances of the codes accordingly on corresponding original and official versions.

The codes and the work of the web service is provided here as FREE of CHARGE and FREEDOM as stated in the GNU GPL.

The user has been warned to follow the GNU GPL in order to use the codes or work.

Canyon Technology Co., Ltd. has made available the full source code of the GPL licensed software, including any scripts to control the compilation and installation of the object code in the software section of this product. Please click to our website: www.canyon-tech.com
